IP-2002

Question:

Are there any additional adjustments for the Desk Microphone input on the IP-2002?

Solution:

In addition to the software controlled gain for the desk microphone there is an internal adjustment R333.

Alignment steps:

With the microphone connected to the RJ-12 desk microphone input connector and a RMS volt meter connected to TP36 (+) and TP28 (-), while speaking in a normal voice and average distance adjust R333 for no more than 2VP-P (.7vrms or -2dBm) for voice peaks.

Adjust software control using web browser or TSM as needed.
